

QUALITY-BUILT™

THE SMARTER CHOICE

Built for the Long Haul

QUALITY-BUILT Premium alternators are remanufactured to exacting OE specifications or better for maximum performance. They undergo rigorous manufacturing and testing processes to deliver unsurpassed reliability with every turn of the key. Our processes incorporate Durability Testing, Root Cause Analysis and Lean Manufacturing principles; all done in ISO/TS 16949 certified manufacturing facilities.

By replacing every component prone to wear with 100% new parts, and end-of-line testing of every unit, **QUALITY-BUILT** delivers what a rebuilt unit can't – peace of mind!

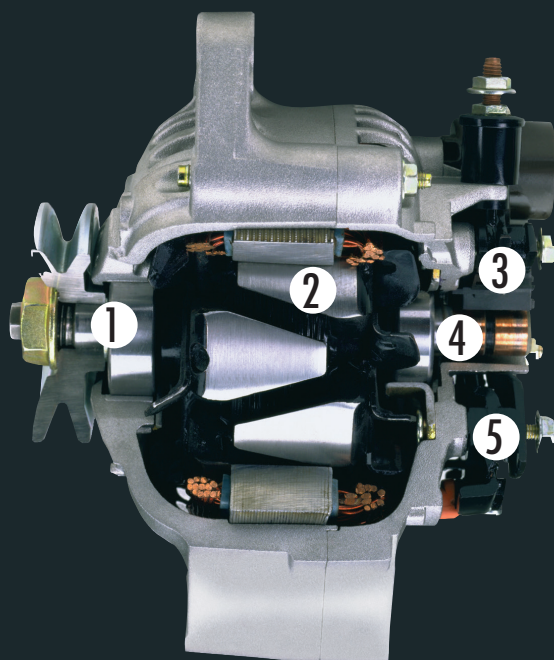

① All bearings are replaced with 100% brand new premium bearings for increased durability, performance and long service life.

② Rotors and stators are 100% electronically tested to ensure performance, then sealed with a protective insulation coating.

③ 100% new, lead free premium brushes for optimum performance and long service life.

④ Slip rings are precision polished for maximum contact resulting in consistent output performance and long service life.

⑤ Rectifiers are 100% electronically tested under variable loads to ensure consistent performance under all driving conditions.
